

3rd grade B  
SOS Animals

2015

Take a look at some mammals from every continent of the world and see how different they are. For example, animals from cold places have fur or a lot of fat for protection, like the wolf and the seal. With its long trunk, the elephant cant get leaves from tree tops.

Some of these animals are in danger. Pollution and deforestation are causing them great damage. We can protect our environment so our children can learn about these mammals in the future. Now let's learn their names and some interesting things about their lives and habitats.

(Author: Liani Moraes)

Teacher Elaine

Can you guess what this  
is?

It lives in a den.

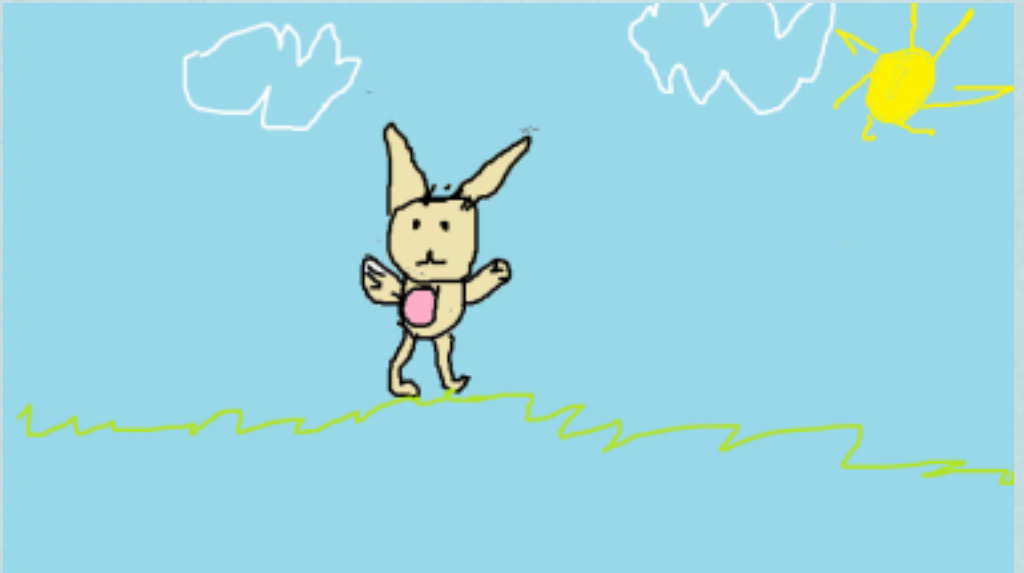

Its habitats are woods, forest and grasslands.

It can hop and run fast.

It has got fur, long ears and short tail.
